Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.	Applicant(s)	
	10/539,629	OPEM ET AL.	
	Examiner	Art Unit	
	RYAN A. JARRETT	2121	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 09 February 2009.
 2a) This action is **FINAL**. 2b) This action is non-final.
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-3 and 5-20 is/are pending in the application.
 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
 5) Claim(s) _____ is/are allowed.
 6) Claim(s) 1-3 and 5-20 is/are rejected.
 7) Claim(s) _____ is/are objected to.
 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.
 10) The drawing(s) filed on 17 June 2005 is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date. _____ .
3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO/SB/08)	5) <input type="checkbox"/> Notice of Informal Patent Application
Paper No(s)/Mail Date _____.	6) <input type="checkbox"/> Other: _____ .

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 02/09/09 has been entered.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Oath/Declaration

The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

The specification to which the oath or declaration is directed has not been adequately identified. See MPEP § 602.

The oath incorrectly identifies the specification as being directed to PCT/SE2003/006021, when in fact it should be PCT/IB03/06021.

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description:

“The safety-hardware unit 11 comprises communication means to communicate with the Controller’s CPU via a bus 14” mentioned on pg. 6 lines 16-18 is not depicted in the Figures.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: reference character 9 depicted in Fig. 4. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin

as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3 and 5-20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 1-3 and 14-16 recite the limitation “single safety controller”. There is no support in the original disclosure for this limitation. These limitations should be changed back to “single controller”.

Claims 5-13 and 17-20 depend from claims 1 and 15 and incorporate the same deficiencies.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 10-12 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 10-12 depend from a cancelled claim.

Claim 14 recites the limitation "the redundant controller unit" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 5-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Andreas Schenk. “SIMATIC S7-400F/FH: Safety-Related Programmable Logic Controller”. SAFECOMP 2000, LNCS 1943 (2000): 286-293.

Schenk discloses:

1. A method to increase a safety integrity level of a single safety controller for control of real world objects, the method comprising:

attaching to the single controller (e.g., Fig. 1: “1 standard CPU 417-4H”) a safety-hardware unit (e.g., Fig. 1: “fail-safe I/O module”) wherein the safety-hardware unit communicates with a central processing unit of the single controller,

connecting a bus (e.g., Fig. 1: “PROFIBUS”) to the single safety controller (e.g., Fig. 1: “1 standard CPU”) and connecting an input/output unit to the bus (e.g., Fig. 1, pg. 287: “Safety-related input from and output to the process are done with special *fail-safe I/O modules*”),

downloading safety-related configuration data and/or diagnostic information to the attached safety-hardware unit (e.g., pg. 288: “The fail-safe I/O modules are configured with the standard hardware configuration tool”, pg. 287: “external fault diagnostics”) and downloading a control function software to the single controller (e.g. Fig. 1, pg. 291: “not safety-related application program”),

configuring the attached safety-hardware unit to execute logic, which depends on the downloaded safety-related configuration data and/or diagnostic information (e.g., pg. 288: “The fail-safe I/O modules are configured with the standard hardware configuration tool”, pg. 287: “The fail-safe I/O modules provide an internal 1oo2 structure with comparison, self-tests and external fault diagnostics”),

actively or passively setting output values of the single controller to a safe state for online safety control (e.g., Fig. 1, pg. 287: “Safety-related input from and output to the process are done with special *fail-safe I/O modules*”),

obtaining access to a plurality of input and output values of a real world object through the bus (e.g., Fig. 1, pg. 287: “Safety-related input from and output to the process are done with special *fail-safe I/O modules*”), and

verifying a validity of the bus communication with the attached safety hardware unit (e.g., pg. 290: “the checksums of the safety telegrams sent are invalid and fault detection and reaction is done by the recipients of safety telegrams, i.e., fail-safe output modules”).

2. The method according to claim 1, wherein the single safety controller has the capability of executing a set of non-safety critical control functions, which set of non-safety critical control functions is the same before as well as after the safety hardware unit is attached (e.g. pg. 291: “Safety-related and not safety-related application program can be processed by the same CPU”).

3. The method according to claim 2, wherein the configuring comprises:
downloading to the attached safety hardware unit diagnostic information, which previously was automatically generated by a software tool as a result of user's configuration of

the single safety controller and which diagnostic information is used in the attached safety hardware unit during safety critical control (e.g., pg. 288: "The fail-safe I/O modules are configured with the standard hardware configuration tool", pg. 287: "external fault diagnostics").

5. The method according to claim 1, wherein the timing supervision of the controller is verified in the attached safety hardware unit (e.g., pg. 289: "Cycle time is checked...indirectly by the recipients of safety telegrams waiting for a new sequence number in the safety telegram").

6. The method according to claim 1, wherein correct sequence of code logic is verified in the attached safety hardware unit (e.g., pg. 289: "Cycle time is checked...indirectly by the recipients of safety telegrams waiting for a new sequence number in the safety telegram").

7. The method according to claim 1, wherein correctness of memory content of the controller is verified in the attached safety hardware unit (e.g., pg. 290: "Self-tests include SP7-ASIC, RAM and CRC of code blocks and operating system").

8. The method according to claim 1, wherein a download of new control functionality logic to the controller is verified in the attached safety hardware unit (e.g., pg. 290: "Self-tests include SP7-ASIC, RAM and CRC of code blocks and operating system").

9. The method according to claim 1, wherein the attached safety hardware unit performs checks in order to allow only users logged on as safety classified engineers and safety classified operators to modify the control functionality logic and parameters (e.g., pg. 290: "password").

10. The method according to claim 4, wherein the bus communication verification logic in the attached safety hardware unit is implemented diverse (e.g., pg. 290: "Comparison of the diverse results of the safety-related application program and fault reaction is done...indirectly

by the recipients of the safety telegrams sent by the safety-related application program, i.e., fail-safe output modules”).

11. The method according to claim 4, wherein the attached safety hardware unit is diverse generating a safety related header for the bus communication (e.g., pg. 290: “Comparison of the diverse results of the safety-related application program and fault reaction is done...indirectly by the recipients of the safety telegrams sent by the safety-related application program, i.e., fail-safe output modules”, “This safety protocol is...implemented in the fail-safe I/O modules”).

12. The method according to claim 11, wherein the input/output unit has two diverse implementations each verifying the correctness of the bus traffic and each generating a safety related header for the bus communication (e.g., pg. 290: “Comparison of the diverse results of the safety-related application program and fault reaction is done...indirectly by the recipients of the safety telegrams sent by the safety-related application program, i.e., fail-safe output modules”, pg. 287: “This safety protocol is...implemented in the fail-safe I/O modules”).

13. The method according to claim 1, wherein the attached safety hardware unit comprises a first and a second module in a redundant configuration, the second module is updated with data that exists first module at the time of a failure and the second module takes over the safety related control of the control system from the first module if a failure of the first module is detected (e.g., Fig. 5: “redundant fail-safe I/O modules”).

14. The method according to claim 13, wherein the redundant controller unit is attached to the single safety controller, which takes over in case of a failure of a primary controller and the redundant controller unit establish communication with either the active first

module or the active second module of the attached safety hardware unit (e.g., Fig. 5: “redundant CPU 417-4H”).

15. A single or 1-channel control system intended for safety-related control of real-world objects, comprising:

a single main central processing unit handling main processes of a single safety controller (e.g., Fig. 1: “1 standard CPU 417-4H”),

a safety-hardware unit (e.g., Fig. 1: “fail-safe I/O module”) attached to said single safety controller (e.g., Fig. 1: “1 standard CPU 417-4H”), the safety-hardware unit comprising means to increase a safety-integrity level of the single safety controller and comprising means to set output values of the single safety controller in a safe state for online safety control (e.g., Fig. 1, pg. 287: “Safety-related input from and output to the process are done with special *fail-safe I/O modules*”).

16. The control system according to claim 15, wherein the safety controller has the capability of executing a set of non-safety critical control functions, which set of non-safety critical control functions is the same before as well as after the safety hardware unit is attached (e.g. pg. 291: “Safety-related and not safety-related application program can be processed by the same CPU”).

17. The control system according to claim 16, further comprising: means for downloading to the attached safety hardware unit diagnostic information, which previously was automatically generated by a software tool as a result of user's configuration of the controller and which diagnostic information is used in the attached safety hardware unit during safety critical

control (e.g., pg. 288: “The fail-safe I/O modules are configured with the standard hardware configuration tool”, pg. 287: “external fault diagnostics”).

18. The control system according to claim 17, further comprising:

an input/output unit (e.g., Fig. 1, pg. 287: “Safety-related input from and output to the process are done with special *fail-safe I/O modules*”) connected to the controller by a bus (e.g., Fig. 1: “PROFIBUS”) and the validity of the bus communication is verified in the attached safety hardware unit (e.g., pg. 290: “the checksums of the safety telegrams sent are invalid and fault detection and reaction is done by the recipients of safety telegrams, i.e., fail-safe output modules”).

19. The control system according to claim 18, wherein the bus communication verification logic in the attached safety hardware unit is implemented diverse (e.g., pg. 290: “Comparison of the diverse results of the safety-related application program and fault reaction is done...indirectly by the recipients of the safety telegrams sent by the safety-related application program, i.e., fail-safe output modules”).

20. The control system according to claim 19, wherein the attached safety hardware unit is diverse generating a safety related header for the bus communication (e.g., pg. 287: “This safety protocol is...implemented in the fail-safe I/O modules”).

Response to Arguments

Applicant's arguments filed 02/09/09 have been fully considered but they are not persuasive. However, the rejection of claims 1-20 under 35 U.S.C. 102(e) as being anticipated by Scott et al. US 6,975,966 is being withdrawn since the effective filing date of Scott et al. does not beat the foreign priority date of the instant application, which is 12/19/02. The foreign priority document of the instant application was published in English. The bib data sheet is being updated to reflect this foreign priority date.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Barthel et al. US 7,337,369 discloses microprocessor-controlled field device for connection to a field bus system.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to RYAN A. JARRETT whose telephone number is (571)272-3742. The examiner can normally be reached on 10:00-6:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert Decady can be reached on (571) 272-3819. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
